

MT ADDE

Corriedale Sheep Stud

Here at Mt Adde our philosophy has been to breed a robust yet highly productive animal that will not only survive but thrive in our challenging dry hill country environment.

My corriedale stud was founded on the purchase of ewes from Bill Bain's "WattleBank Stud".

High performance recorded rams have been sourced from leading Studs throughout NZ.

My objective is to breed a resilient early maturing sheep with an open face and quality mid micron fleece 24 - 30 microns with low CV and good carcass.

80 rams for sale this season run in one mob under commercial conditions.

A great deal of time and effort goes into selecting high quality genetics that will add value to our flock and that of our clients' with the focus on commercially productive traits.

All rams

- Wool tested
- Eye muscle and fat scanned
- Foot rot gene marker tested

**Inquires and inspection
always welcome**
